

Waldenser School

Mörfelden-Walldorf, 2012 Ongoing project
Schools/educational facilities

The school grounds in Mörfelden-Walldorf were renewed and several buildings located on the site needed to be demolished to make way for construction work. On the northwest edge of the site one existing building plus basement, dating from the 1920s, was retained. The design by HWR-Architekten envisaged linking a new two-storey school building, also with a partial basement storey, to the existing building. The schneider+schumacher building and project management team was responsible for project management on site.
